

For Trust in Data Protection

Security and Access solutions for Data Centers

ABLOY

Keep data untouchable from cyber and physical threats, 24/7

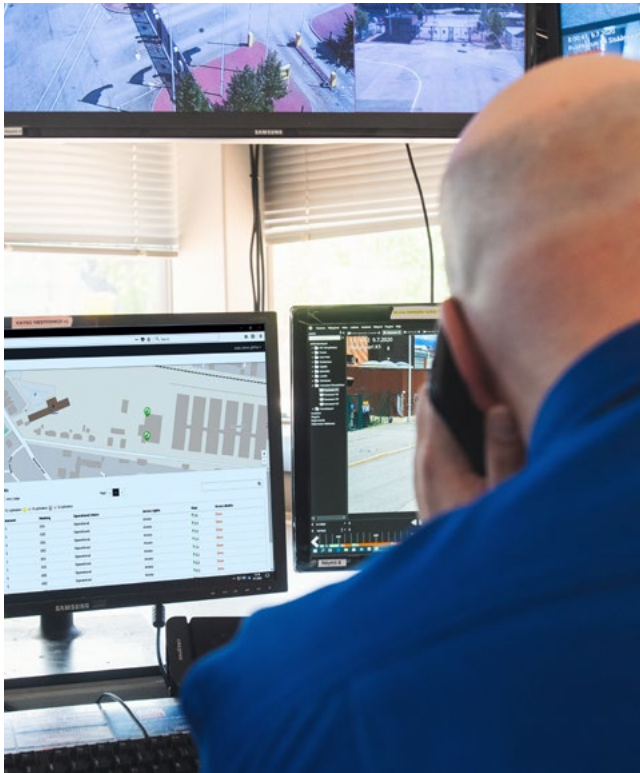

Information and data transfers are being converted into digital formats. This increase in online transactions is expected to double the demand for data centers and data centers security in the next five years. This also means that without upgrading your existing solution all current challenges, demands on time and costs could be easily multiplied. This includes management and the

number of people needing access control whose needs should be handled with integrity. Securing data racks, locks, doors and exits, demands security solutions that deliver the highest level of protection against cyber and physical security threats. Abloy Oy has experience in providing these solutions across many completed data center projects, worldwide.

Meeting global security standards with full 3rd party integration

All data center security solutions must meet the latest **EN 50600** standards. Integration with 3rd party security and access management systems is essential to ensure that all data center security systems can communicate with each other. This creates tighter security and greater overall situational awareness – a main feature of ABLOY solutions.

Simplifying processes and increasing operational efficiency

Simplifying processes is important to keep security tight and running smoothly. This adds to operational efficiency as less time is spent on managing keys and monitoring or granting access rights.

ABLOY solutions can improve operational efficiency in data centers as follows:

-  Automating ticketing or visitor logging processes, without burdening security staff
-  Decrease information misuse to reduce internal threats
-  User-friendly interface for real time monitoring of visitors, staff and contractors, including in the cargo bays
-  Minimise time spent on key and access management
-  Only validated persons have physical access to data
-  Reduce downtime and lost keys
-  Processes remain simple and transparent, no matter how many security layers your data center requires
-  More uptime with well planned maintenance processes

A comprehensive and flexible range of choices

Our range of products for data center security and access cover all entry and access points including doors, locks, data racks and exits, and meet the latest **EN 50600** industry standards.

ABLOY® ELECTRIC LOCKS

Designed for a seamless, aesthetic and smooth performance in every circumstance, the ABLOY Electric Locks are the smartest part of your access control system and are easily integrated.

PROTEC² CLIQ™

PROTEC² CLIQ is Abloy's comprehensive and flexible key and access management system. It's a wireless solution with quick and easy installation, electronic keys, cam and cabinet locks, and an audit trail. It provides instant and precise situational awareness of movements.

ABLOY® DOOR CLOSERS

Frequent passage demands smooth traffic, access control and fire safety. ABLOY door closers and fire door closing systems take all this into consideration. Our extensive selection of models offers a reliable solution for data centers.

CUSTOM SOLUTIONS

For decades, Abloy Oy has been developing a range of customised applications for Original Equipment Manufacturers and Professional End Users. Working closely with our customers allows Abloy to develop customised solutions at many different levels. Whether it's a new configuration of existing components or a completely new structure for an existing system, our goal is always a cost-effective holistic solution, offering a significant competitive advantage.

805006 | 3/2022

ABLOY offers security and locking innovations dedicated to creating more trust in the world. Combining digital and mechanical expertise, Abloy Oy develops industry-leading security solutions that protect people, property and business. Abloy is part of the ASSA ABLOY Group, the global leader in access solutions. Every day, we help billions of people experience a more open world.
